

MAXCRETE

STRONGER
CEMENT

DURABLE
CONCRETE

Chettinad **MAXCRETE** is a revolutionary eco friendly product with a unique blend of fast setting and high early strength cement designed to provide durable concrete. The superior strength, superfine specific surface area and fast setting lead to robust construction in fast phase. This versatile product offers a reliable quality, high performance solution to a maximum range of applications requiring high early strength.

MAX ADVANTAGES

- High 1 day strength and quick setting time making it ideal choice for concreting applications.
- High Durability
- Quick removal of form works
- High early strength improving productivity of precast requirements
- Pozzolonic action forms denser concrete matrix and resists ingress of chloride in concrete from external environment and protects reinforcement.
- Specially formulated for best quality concrete Compatible with M-Sand
- Lower cement consumption leading to economical mixes.
- High fineness and uniformly distributed particle size of Chettinad **MAXCRETE** cement provides cohesive concrete mixes
- Leads to dense and Impermeable concrete

MAX APPLICATIONS

- Roof slab concrete
- Hollow and solid block units where high one day strength is required
- Ready mix concrete plants
- Pipe manufacturing and precast/pre-stressed concrete
- Under water and marine exposure structures
- Mass concrete works, viz. Raft foundation, Dams etc.
- Infrastructure works like road, bridges, ports etc.
- Effluent and Sewage treatment plants.
- All domestic and commercial constructions

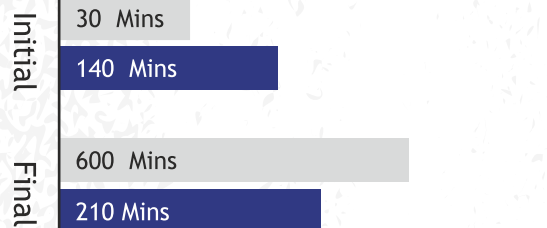

- FAST SETTING**
- HIGH STRENGTH**
- HIGHLY DURABLE**
- CONCRETE**
- ROOF SLABS**
- HOLLOW BLOCKS**
- PRE CAST STRUCTURES**
- LIGHT WEIGHT BLOCKS**
- AERATED BLOCKS**
